GRAIN AND SEED CLEANING

Old style farming is going out of fashion, as it is proving unprofitable. The habit of sowing grain or seeds just as it is harvested, weed seed and all, was one of the worst habits of many farmers.

They are finding that to produce the best results they must sow the best seeds that can be obtained and that means seed that is recleaned in first-class shape; all the weed seed and foreign seeds being removed from the grain or seeds that they intend to sow.

In order to take proper care of those who desire the best results we have installed a first-class power cleaner.

We reclean all the seeds and seed grain we sell; also do cleaning for any one who has their own grain or seeds and desire to have them recleaned before seeding.

Our charges are reasonable and we guarantee the quality of our work.

GRAIN ROLLING AND CHOPPING

Farmers and feeders generally find it far more economical to roll all grain before feeding.

All stock will do better, and it is a large saving in feed, as it does not take over 75 per cent as much as in the whole grain.

We have installed a large roller and are prepared to take care of your custom work in first class shape and on short notice.

Our mill is equipped with a large suction fan and cleans the grain before it is rolled so that your stock gets the clean feed and not the dust and dirt as from the usual milling process.

You will find our prices as low as first-class work may be done for.
